PIONEERING THE FUTURE

PRECIDIAN INVESTMENTS' FORAY INTO TOKENIZATION

With over three decades of experience creating cutting-edge financial instruments, Precidian has turned its attention to the development of tokenization technology/wrappers. Precidian has developed both patented and patent-pending processes to achieve the tokenization of ETFs, mutual funds, and equities on blockchain platforms. The processes developed promises to streamline the issuance, fractionalization, trading, and custody of today's securities while eliminating many of the inefficiencies associated with traditional intermediaries. Global reach, increased transparency, improved markets, instantaneous trading and settlement achieved through immutable ledgers while maintaining global regulatory compliance and investor protections, are all possible with Precidian's technology.

This technology has myriad applications for traditional asset managers, not the least of which is providing an additional channel for client distribution. As the financial markets move rapidly towards an environment focused on tokenization of all asset classes, you don't want to get left behind. We encourage you to reach out to us at Precidian info@precidian.com so we can begin conversations on how our technology can help your business.
